

iOS DeCal : Lecture 11

SWE in iOS

April 25, 2017

Announcements - 3/25

Final Projects due next Tuesday at 11:59

Projects due Tuesday of dead week

Presentations on Friday (in Jacobs 310 at 11am)

Lab 7 (Objective C) due tonight (11:59)

Make sure to submit Lab 7 to Gradescope (even if you got checked off)

Jacobs Design Showcase

Thursday, May 4th from 9:30-11:30

Interest form due on Thursday!

Announcements - 3/25

Lab Attendance Not Required this Thursday

Come by to either lab for project help!

TA Applications and Feedback Form will be going out soon

We'll announce it again at the Final Presentation

Please fill out the Feedback form - we know we can improve!

Overview : Today's Lecture

Experience with iOS in Industry:

Akilesh - Apple

Paige - Tumblr

Maya - Facebook/Pinterest

Sameer - Concur

Interview Question Practice!

SWE at Apple

Apple

Location - Cupertino

Length - 12 Weeks

**How to apply - Go to
networking sessions or get
referrals!**

Interview Process

Interviews based on specific teams.

Not your typical coding interview:

- Team Specific Questions
- They love autolayout questions
- Be ready to build an app from scratch

What I did!

Xcode Interface Builder Team

- Made auto-layout smarter
- Super smart and helpful team
- Intense Code-Review Process
- EVERYTHING IN OBJECTIVE-C

Life @ Apple

iOS SWE at a startup

iOS at a Startup : Overview

Location - Probably somewhere in South Bay

Length - who knows!

How to apply - Ask around!
(Or check out the pinned posts on the CS-198 Piazza page :))

iOS internship at a Startup

Takeaways and tips from my experience

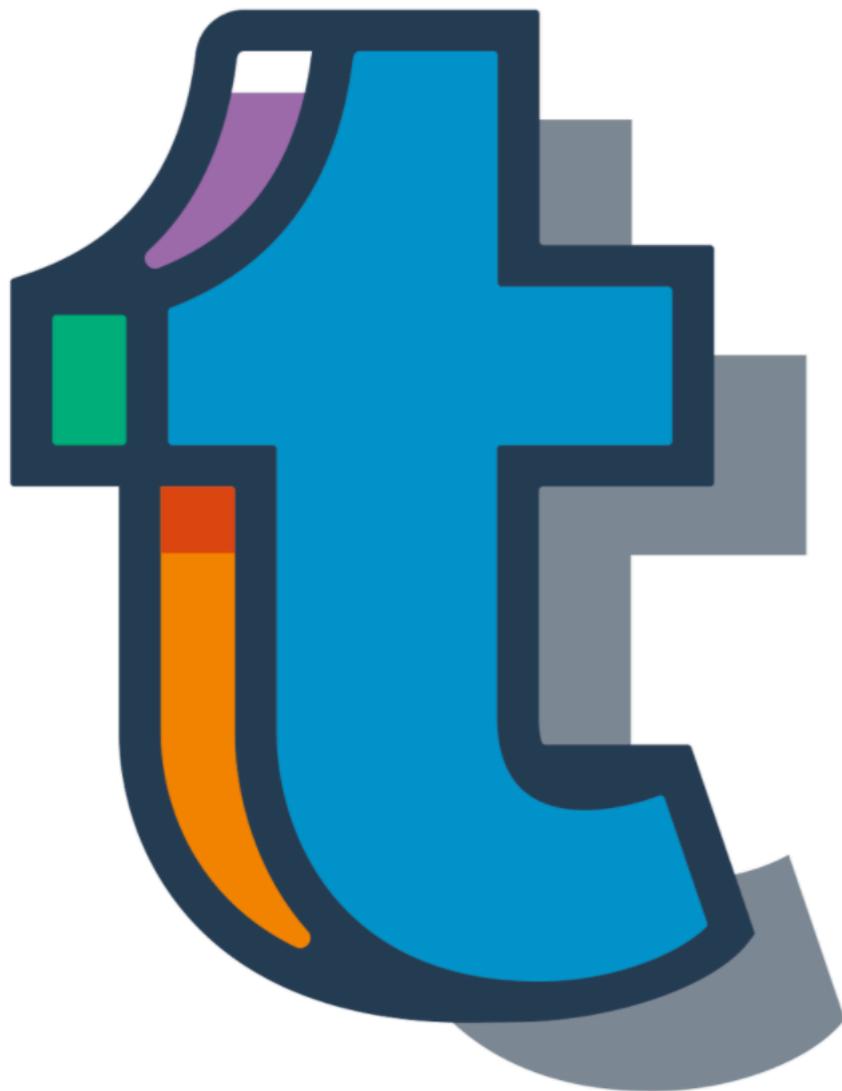

Get your foot in the door if you don't have previous iOS experience

Get accustomed to working with a large scale project

Don't be afraid to ask for help!

SWE at Tumblr

iOS at Tumblr : Overview

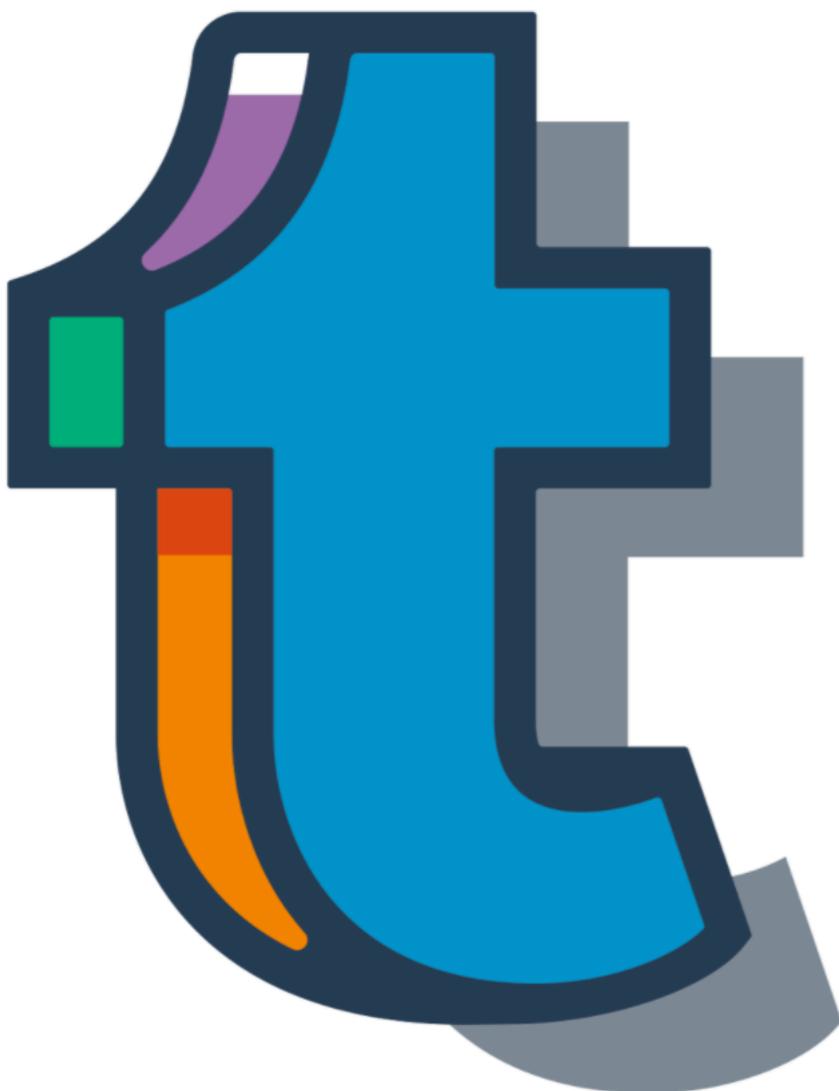

Location - NYC (1 block away from Madison Square Park!)

Length - 12 weeks

How to apply - Fill out application at tumblr.com/internships. Wait for an email back from a recruiter.

iOS at Tumblr : Overview

Apply for a specific role (not a general SDE position)

Interview Process

- Interview with recruiter
- Coding interview with manager
- Take home Programming Project
- 4 interviews with respective team (I did them remotely)

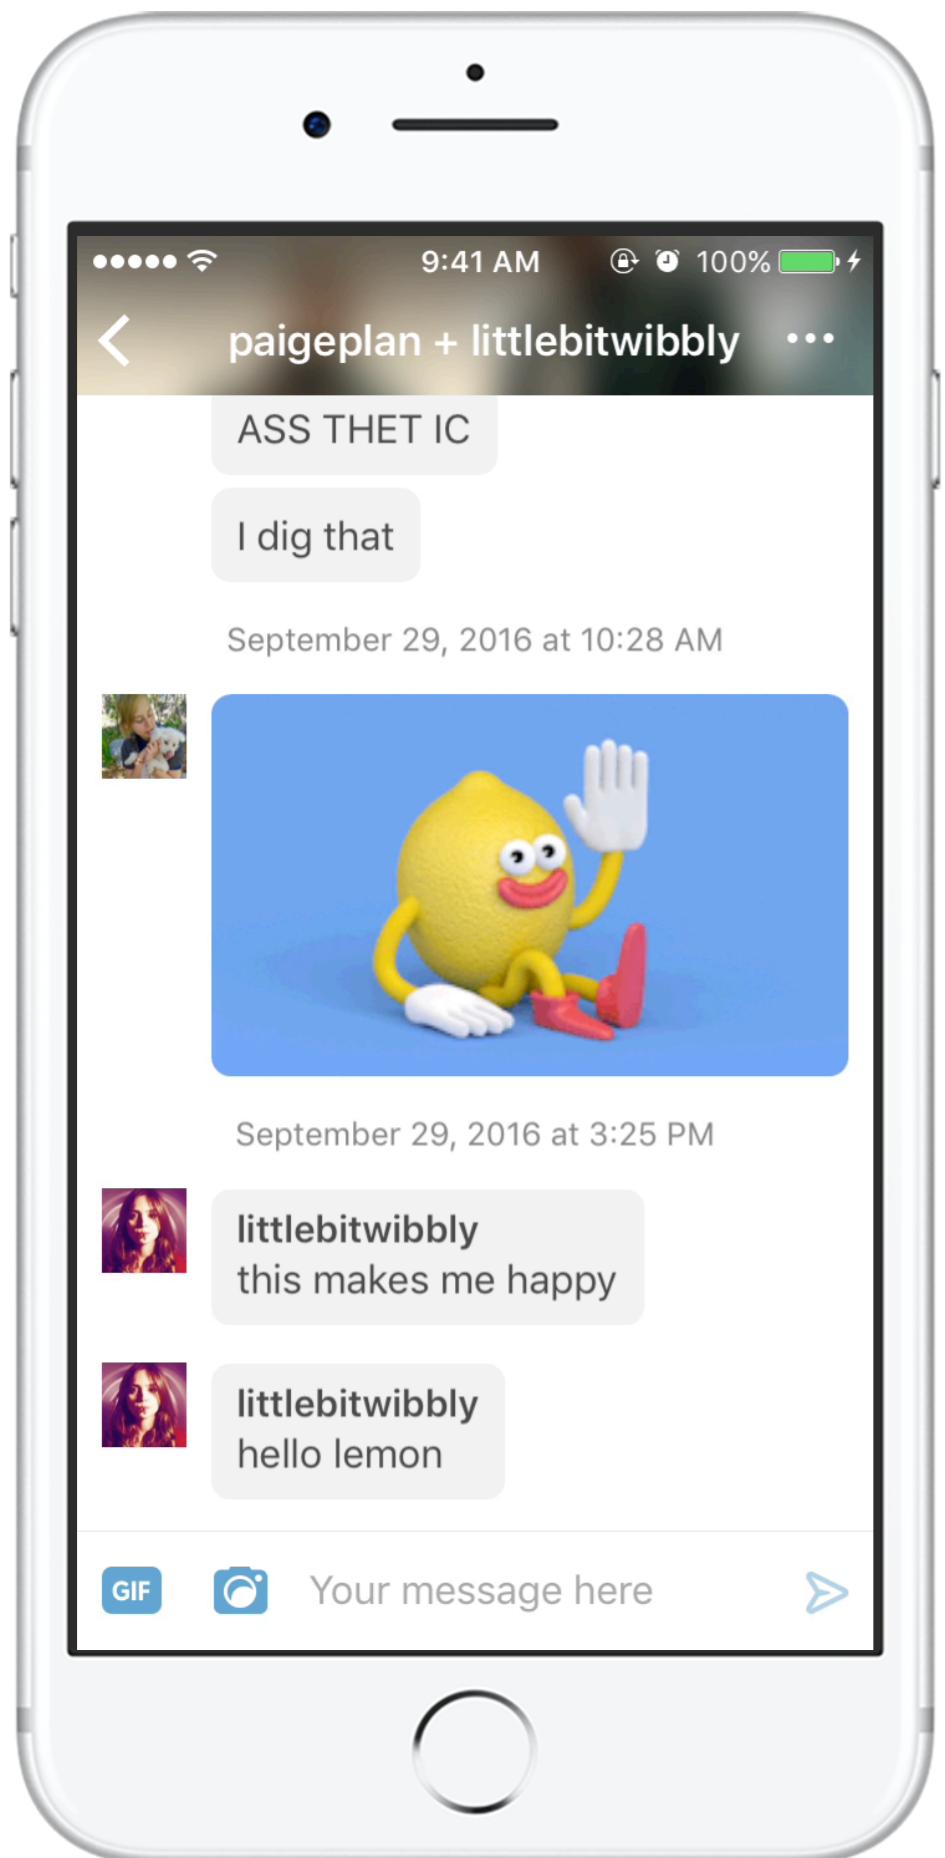

Tumblr iOS Team

Teams are super tiny!

iOS Core Team - all iOS
Product Teams - one iOS
dev per team

Each intern matched with
a mentor working in the
same team

First Two Weeks

Once you first start, you're assigned to some small tasks throughout the app (bug fixes, small UI changes, etc)

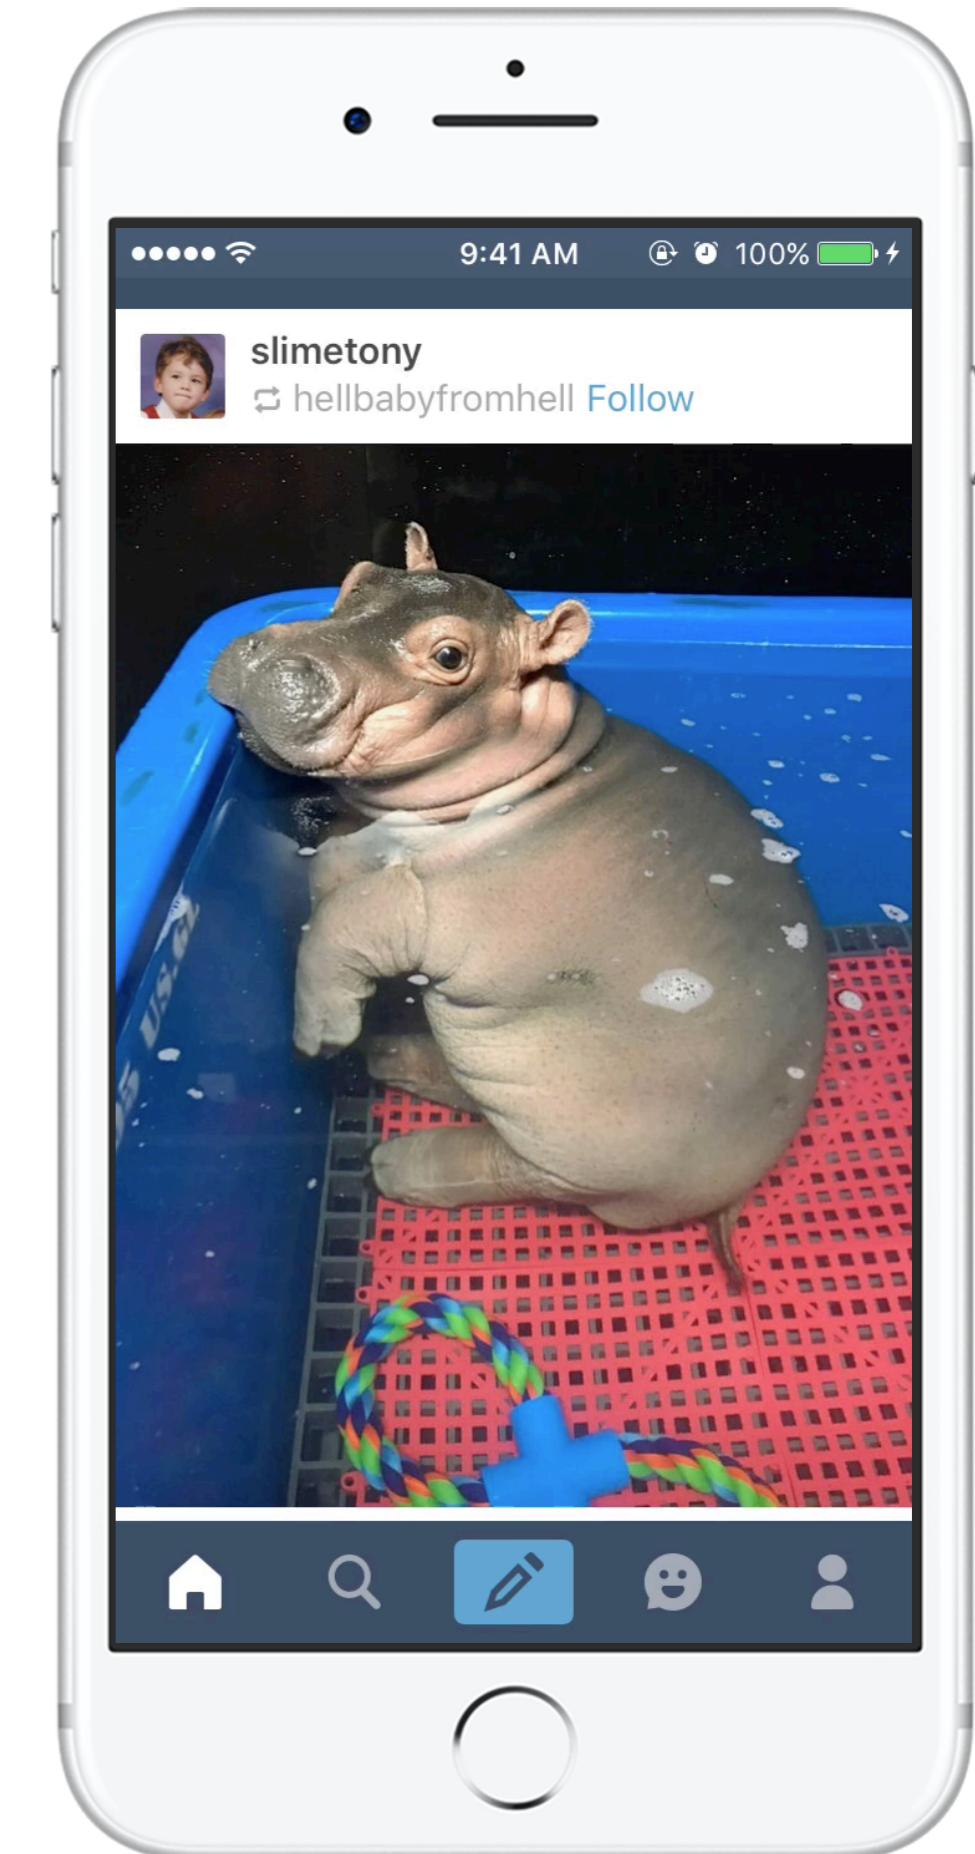

This helps you get a sense of what the code base is like
Get to have fun with some
~legacy code~

Intern Projects

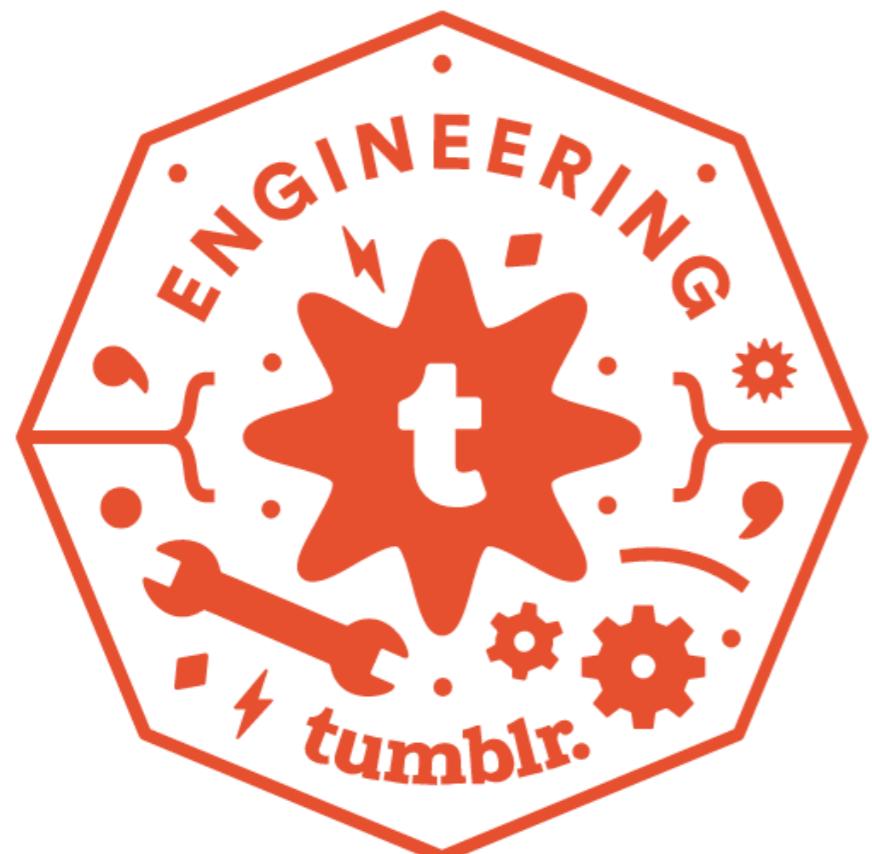

About two weeks into internship, you get to pick a intern project

List of new features - pick your top three

After one gets approved, develop an architecture plan, hold an architecture meeting, then work on that for rest of summer

iOS at Tumblr : Takeaways / Tips

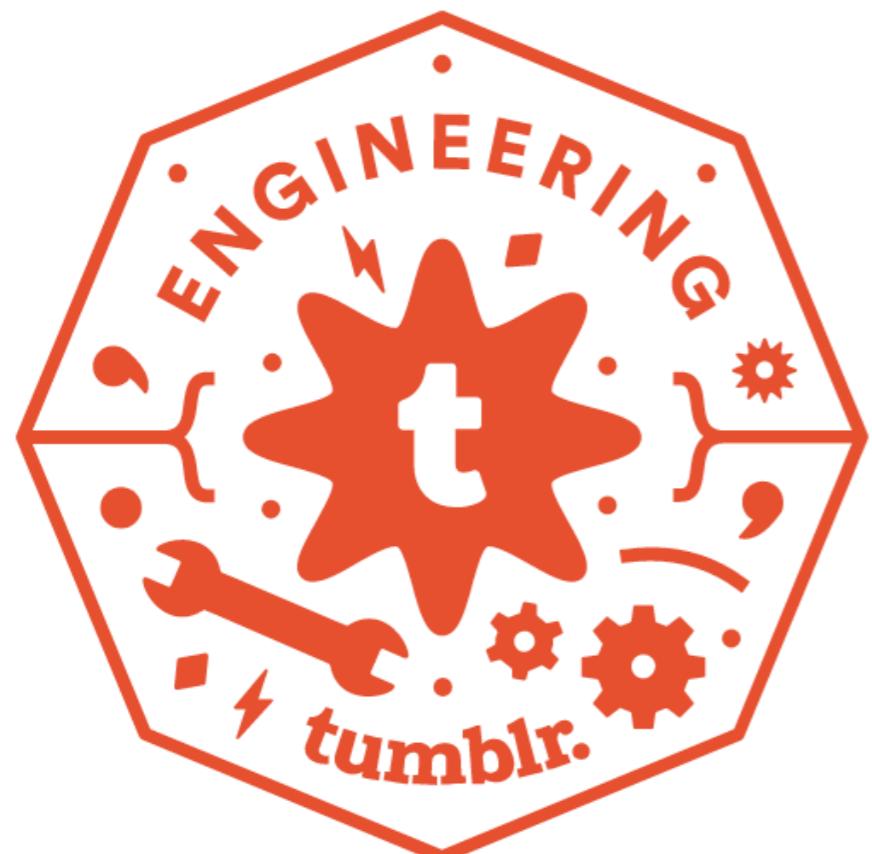

**Know how to use Xcode
debugging tools before hand**

Search tools (file search,
variable search) breakpoints,
console, etc.

Get familiar with Objective C
(older companies)

Ask for help (again)!

iOS at Tumblr : Takeaways / Tips

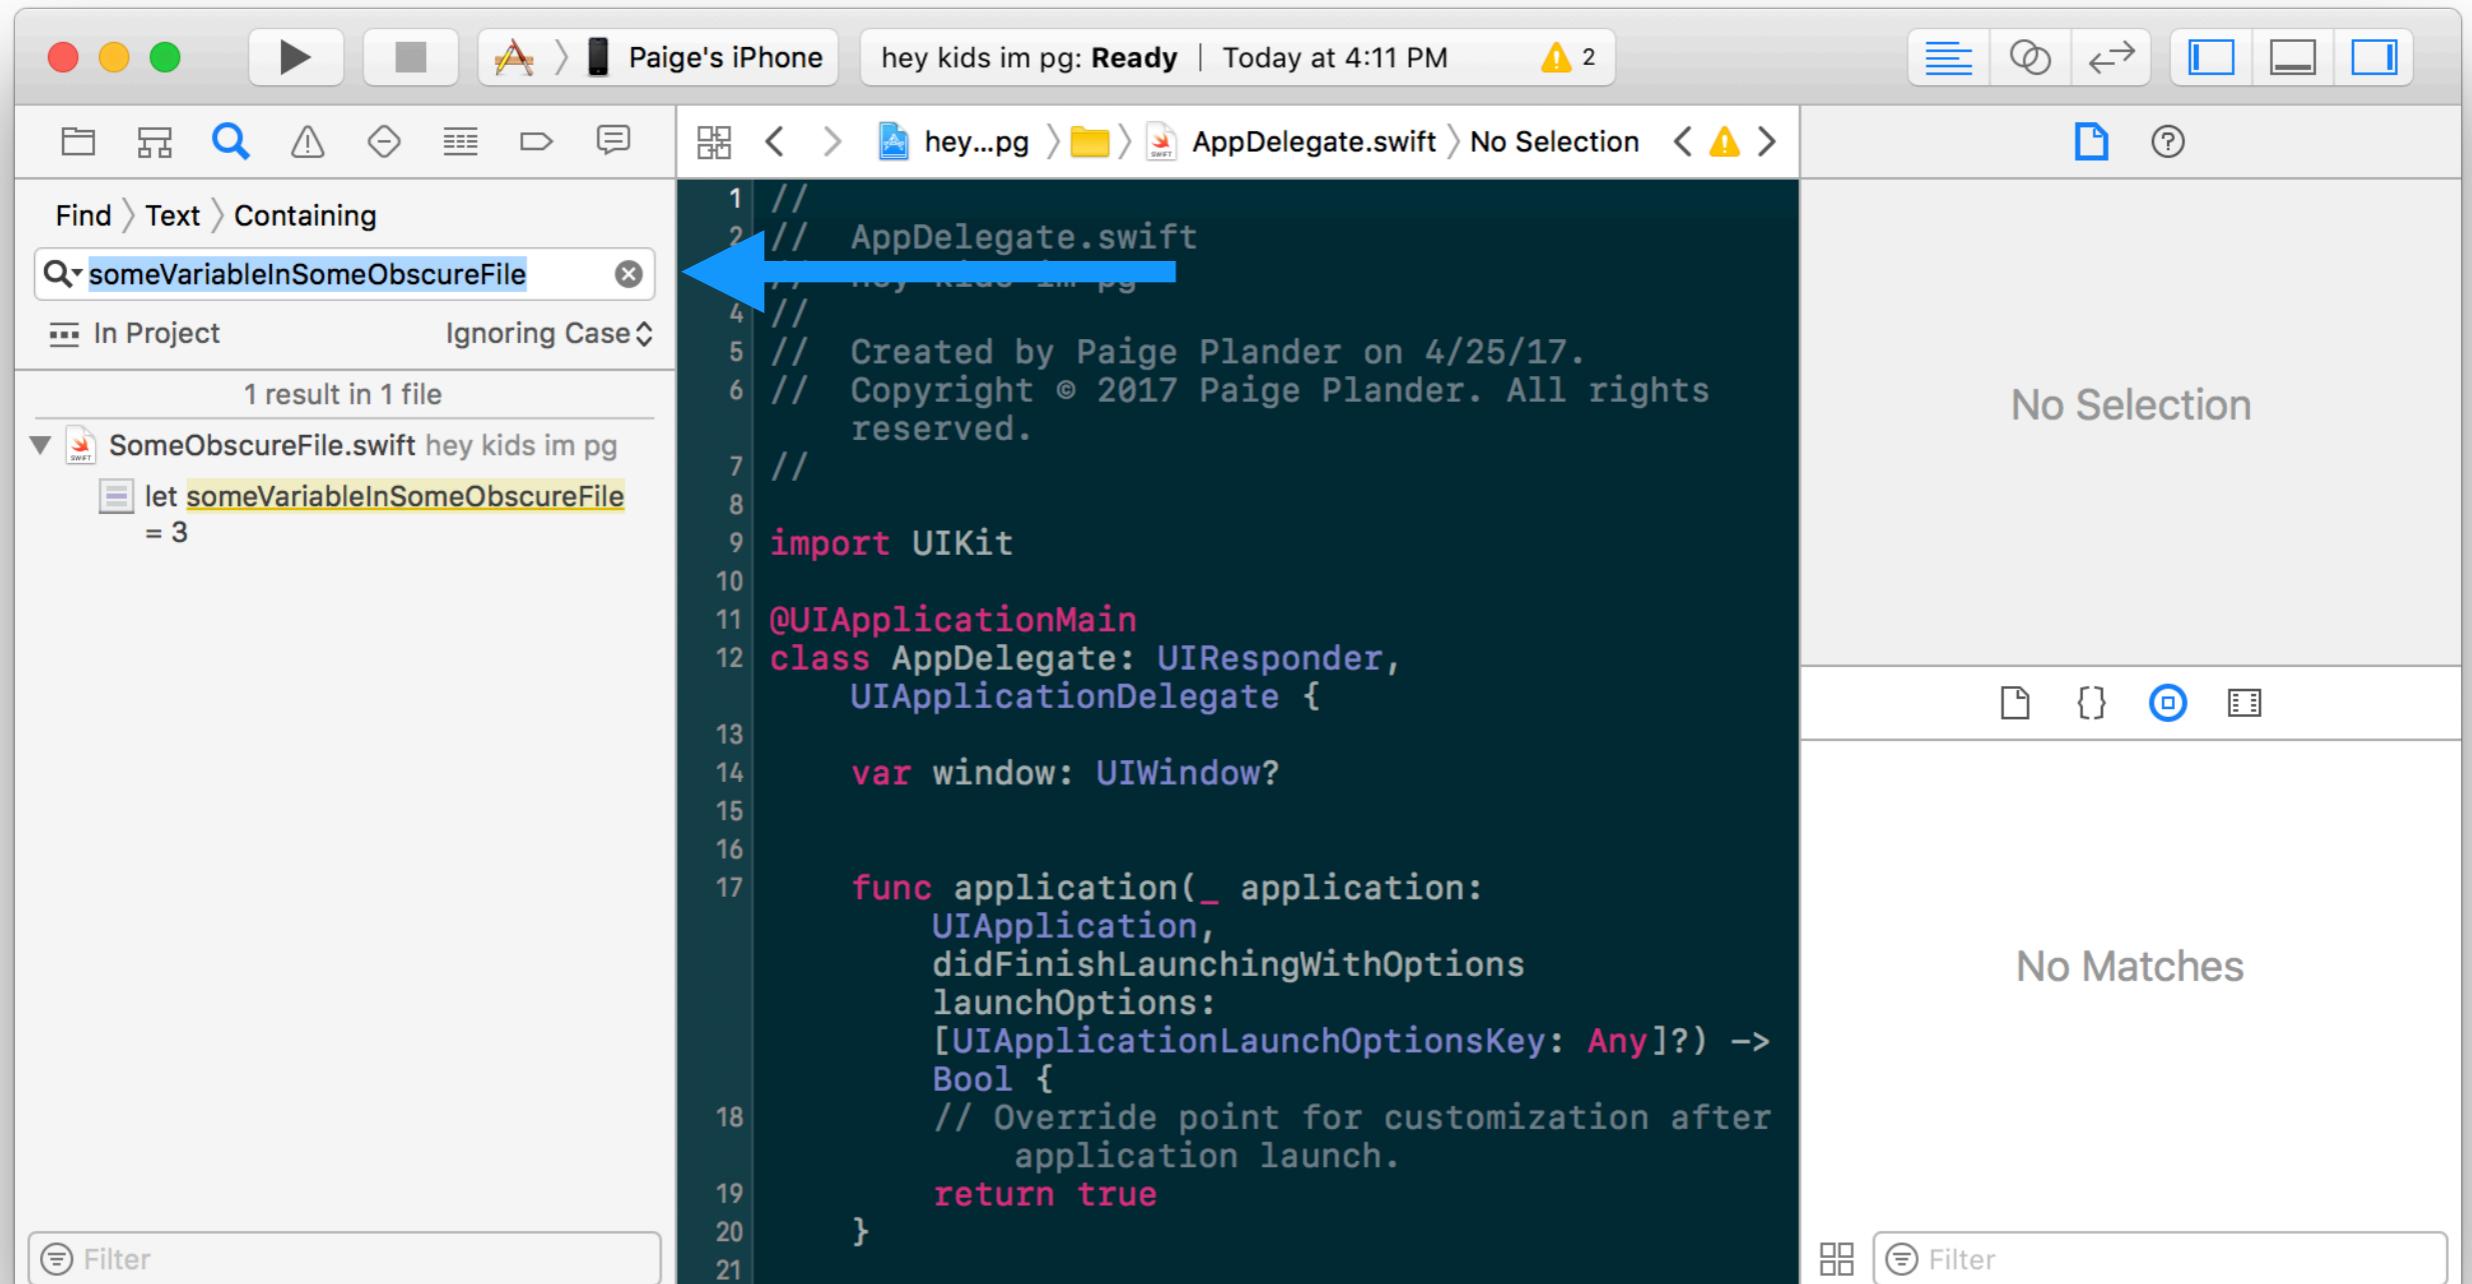

**Know how to use Xcode
debugging tools before hand**

Search tools (file search,
variable search) breakpoints,
console, etc.

Get familiar with Objective C
(older companies)

Ask for help (again)!

A slight detour

The screenshot shows the Xcode interface with a search results window open. The search term 'someVariableInSomeObscureFile' is highlighted in blue in the search bar. The results show one match in the file 'SomeObscureFile.swift'. A blue arrow points to the first occurrence of the search term in the code.

```
// AppDelegate.swift
// Created by Paige Plander on 4/25/17.
// Copyright © 2017 Paige Plander. All rights reserved.

import UIKit

@UIApplicationMain
class AppDelegate: UIResponder, UIApplicationDelegate {

    var window: UIWindow?

    func application(_ application: UIApplication, didFinishLaunchingWithOptions launchOptions: [UIApplicationLaunchOptionsKey: Any]?) -> Bool {
        // Override point for customization after application launch.
        return true
    }
}
```

Searching for a specific variable / method / comment

A slight detour

The screenshot shows the Xcode interface with a search results sidebar on the left and a code editor on the right.

Search Results (Left):

- Find > Text > Containing
- Search term: `reallyCommonVariableName`
- Filter: In Project, Ignoring Case
- Results: 4 results in 4 files
- Files found:
 - HeyHey.swift: `let reallyCommonVariableName = 3`
 - oiwjaef.swift: `var reallyCommonVariableName = "I love the iOS DeCal!"`
 - SomeObscureFile.swift: `let reallyCommonVariableName = 98213921`
 - YoYoYoViewController.swift: `let reallyCommonVariableName = UIView()`

Code Editor (Right):

```
// AppDelegate.swift
// hey kids im pg
//
// Created by Paige Landis on 4/25/17.
// Copyright © 2017 Paige Landis. All rights reserved.

import UIKit
@UIApplicationMain
class AppDelegate: UIResponder, UIApplicationDelegate {

    var window: UIWindow?

    func application(_ application: UIApplication, didFinishLaunchingWithOptions launchOptions: [UIApplicationLaunchOptionsKey: Any]?) -> Bool {
        // Override point for customization after application launch.
        return true
    }
}
```

A large blue arrow points from the text "Helpful when many files here" to the file path in the Xcode toolbar: `hey...pg > AppDelegate.swift`.

Text Overlay:

Helpful when
many files
here

No Selection

No Matches

Search with filename filtering (saves a lot of time!)

A slight detour

The screenshot shows the Xcode interface with a search results window open. The search term is "reallyCommonVariableName". The results list shows one file, "HeyHey.swift", which contains the variable declaration "let reallyCommonVariableName = 3". A blue arrow points from the text "filters search for file with this name" to the file name "HeyHey.swift" in the results list.

```
// AppDelegate.swift
// hey kids im pg
//
// Created by Paige Plander on 4/25/17.
// Copyright © 2017 Paige Plander. All rights reserved.

import UIKit

@UIApplicationMain
class AppDelegate: UIResponder, UIApplicationDelegate {

    var window: UIWindow?

    func application(application: UIApplication, didFinishLaunchingWithOptions launchOptions: [UIApplicationLaunchOptionsKey: Any]?) -> Bool {
        // Override point for customization after application launch.
        return true
    }
}
```

filters search
for file with
this name

heyhey.swift

Search with filename filtering (saves a lot of time!)

A slight detour

The screenshot shows the Xcode interface with a search results window open. The search term is "reallyCommonVariableName". The results show four matches across four files, with one result highlighted in the "AppDelegate.swift" file.

Identity and Type

- Name: AppDelegate.swift
- Type: Default - Swift Source
- Location: Relative to Group
- Full Path: /Users/paige/Desktop/hey kids im pg/hey kids im pg/AppDelegate.swift

hit up the Tumblr roof a ton!!!

SWE at Facebook

iOS at Facebook : Overview

Location - Menlo Park

Length - 12 weeks

How to apply - [https://
www.facebook.com/careers/
university/](https://www.facebook.com/careers/university/)

What I did

- Main project - swipe through **all** the photos in a message thread
 - lots of code refactoring
- Few small tasks
- Project depends on your mentor

Messenger iOS Team

- around 30 people on iOS (in 2015)
- 2 week release cycle
- Objective-C
- Huge codebase - spent a lot of time reading code

Takeaways/Tips

- Ask questions
- Talk to other employees
- Don't try to figure out everything on your own!
- Be aware of the release schedule

iOS at Pinterest

- More emphasis on consistent design
- Made a design doc!
- AsyncDisplayKit aka Texture
- also Objective-C
- smaller teams

SWE at Concur

iOS at Concur: Overview

Location - Downtown San Francisco (most interns were in Seattle, though)

Length - 10 Weeks

How to Apply - Can apply directly online or at career fairs/hackathons

iOS at Concur: Applying

- Phone interview
 - Mostly behavioral (what interests you and why?)
- Technical video conference w/ engineers
 - Mix of iOS-specific and general software questions
 - Be able to think about challenges/ pitfalls
 - Autolayout vs. Programmatic - Pros and Cons?
 - Know your Swift - style, data structures
 - Not typical coding questions

iOS at Concur: Workflow

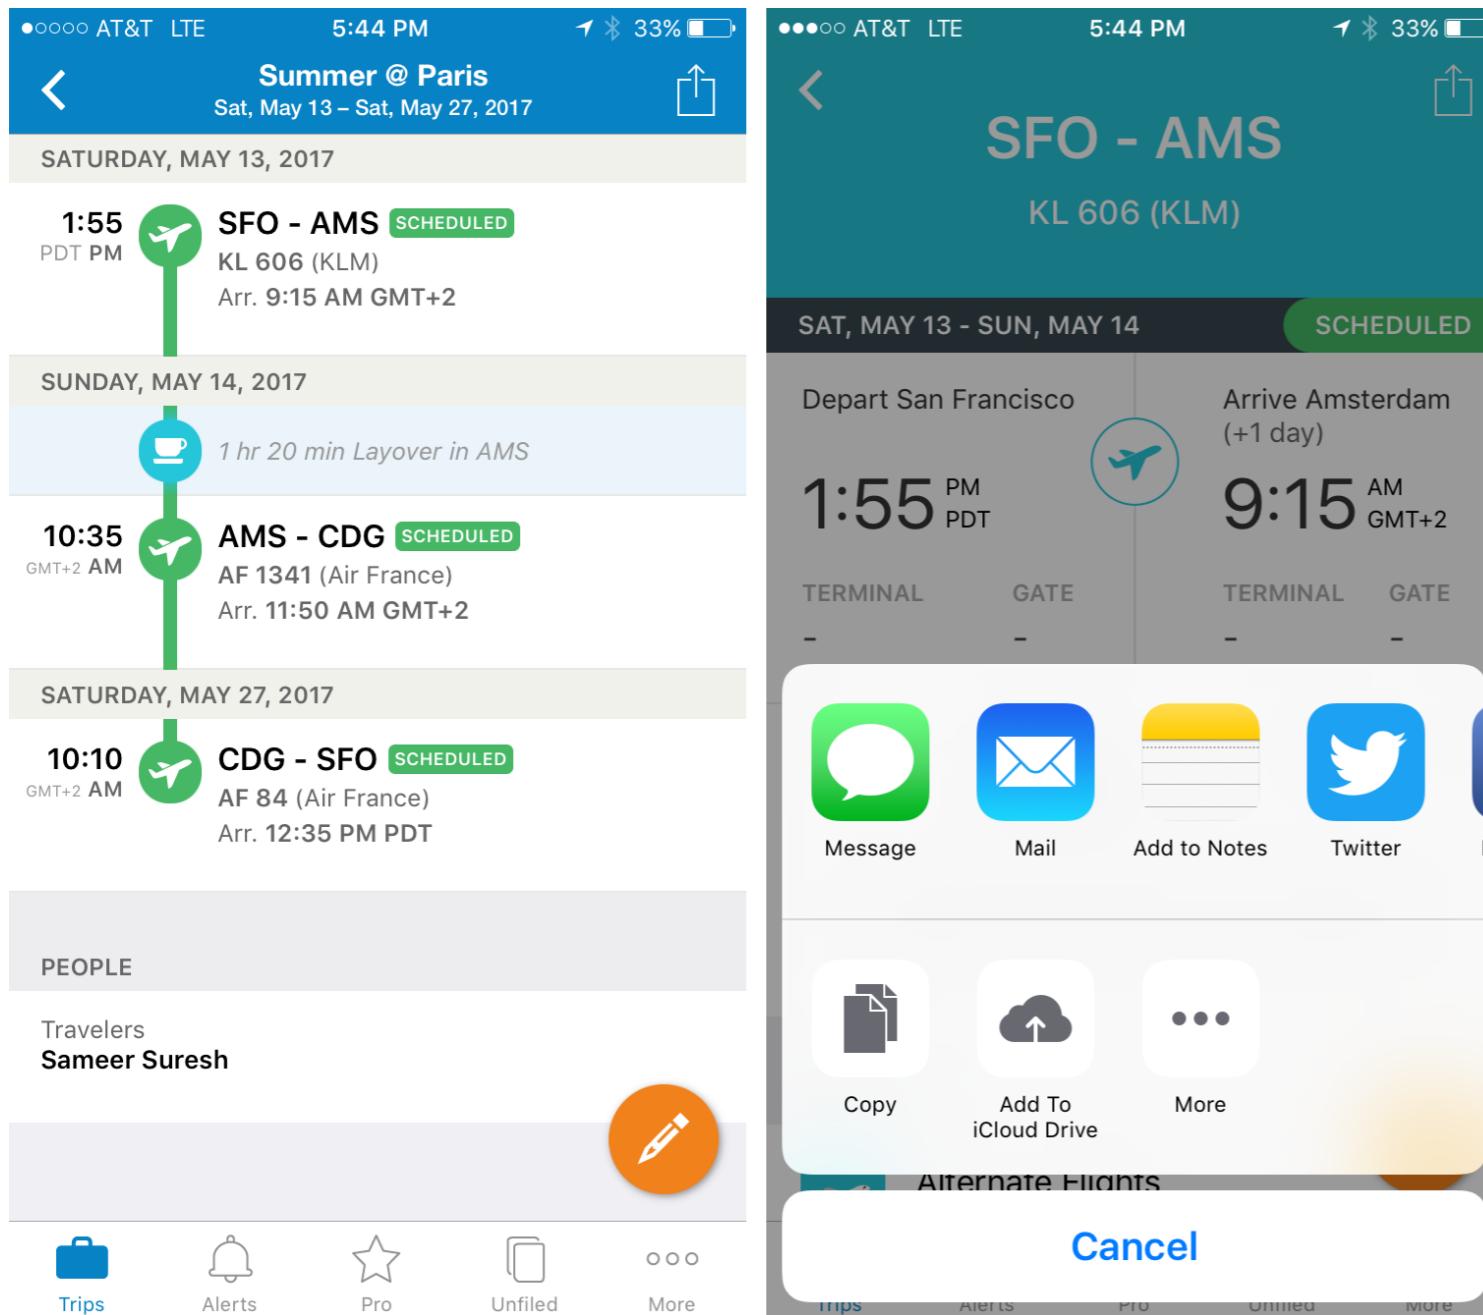

- Work in small teams, 7-8 people each
 - Teams not divided by platform/focus
- Agile methodology - everything done in 2 week sprints
- Set goals every two weeks, write your own tickets (Jira), move them through the pipeline
- Interns can take on large projects (still distributed in sprints) or work on smaller tickets just like full-time engineers

iOS at Concur: Workflow

- Agile --> frequent meetings
 - Demo work done from each sprint
 - Look back on what was done, what needs to still be done
 - Small teams working on the same things
- Code reviews: your code is never right the first time around
- Dev process: new branches for every ticket

iOS at Concur: What I Did

- Sharing trip plans via any social media outlet
- UIActivityViewController
- More flexibility - share many plans at a time
- Auto-detect screenshots

iOS at Concur: What I Did

The image contains two screenshots of the TripIt mobile application.

Screenshot 1 (Left): Flight Details

- AT&T LTE, 5:44 PM, 33% battery
- Flight: SFO - AMS
- Airline: KL 606 (KLM)
- Date: SAT, MAY 13 - SUN, MAY 14
- Status: SCHEDULED
- Depart San Francisco: 1:55 PM PDT
- Arrive Amsterdam: 9:15 AM GMT+2 (+1 day)
- Terminal: -
- Gate: -
- Duration: 10h 20m
- Confirmation: Check-in not yet available

Screenshot 2 (Right): Shared Flight Plan

- AT&T LTE, 5:45 PM, 33% battery
- Title: My Tripl Flight Info
- Cancel | Send
- Tripl from Concur logo
- Text: Tripl user, Sameer Suresh, wants to share their plans with you:
- Sat, May 13**
 - Flight icon: 1:55 PM PDT SFO to AMS
 - Airline: KL 606 (KLM)
- Sun, May 14**
 - Flight icon: 9:15 AM GMT+2 Arrive Amsterdam (AMS)
- I use Tripl to organize and share travel plans, so trip details are in one place.
- I simply forward travel confirmation emails to plans@tripit.com, and Tripl automatically creates

- Primarily front-end, but some work on Tripl API
- Closely connected with UI/UX, PM Interns
- Navigating a huge codebase, half Obj-C and half Swift

iOS at Concur: iOS 10!!

Hello, W W D C 16.

/* June 13-17 */

- After release of iOS 10, worked on iMessage extension to share plans without opening app

Life at Concur

Check-In

Interview Questions!

MVC Review

Question: What are the three roles of MVC (just name them) and what are the responsibilities of each role?

MVC Review

Question: What are the three roles of MVC (just name them) and what are the responsibilities of each role?

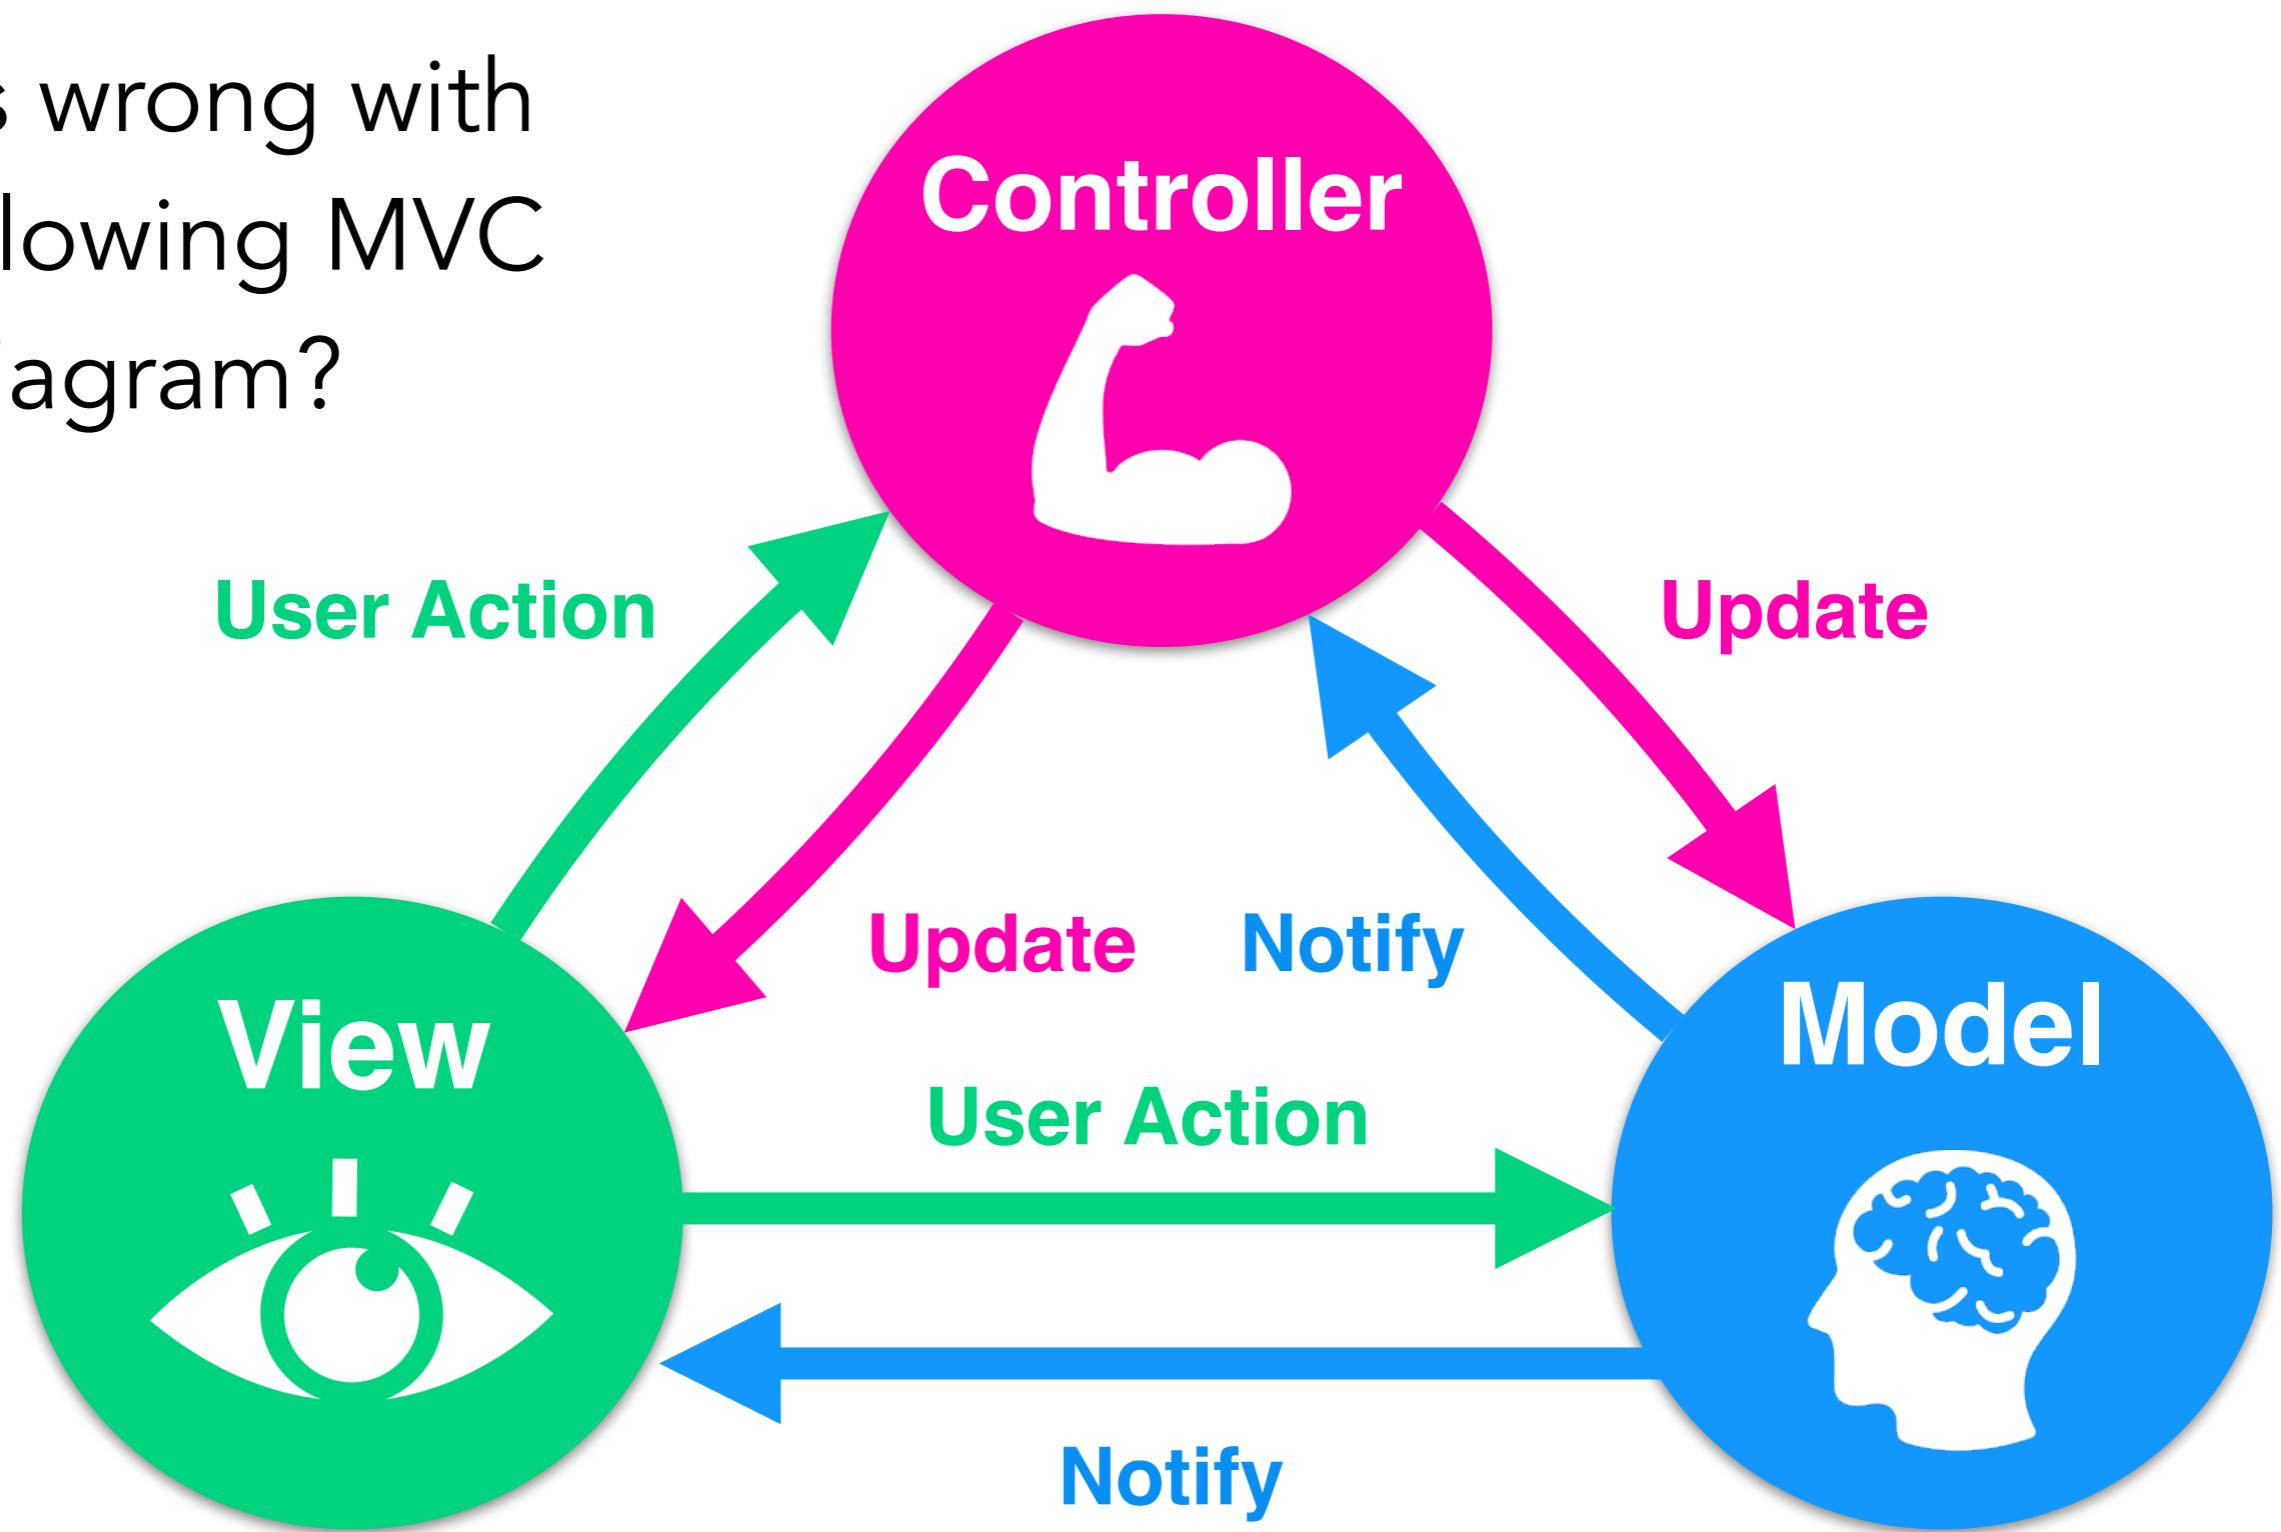

Model - encapsulates data and defines logic / computations

View - what the users see and interact with

Controller - intermediary between models and views

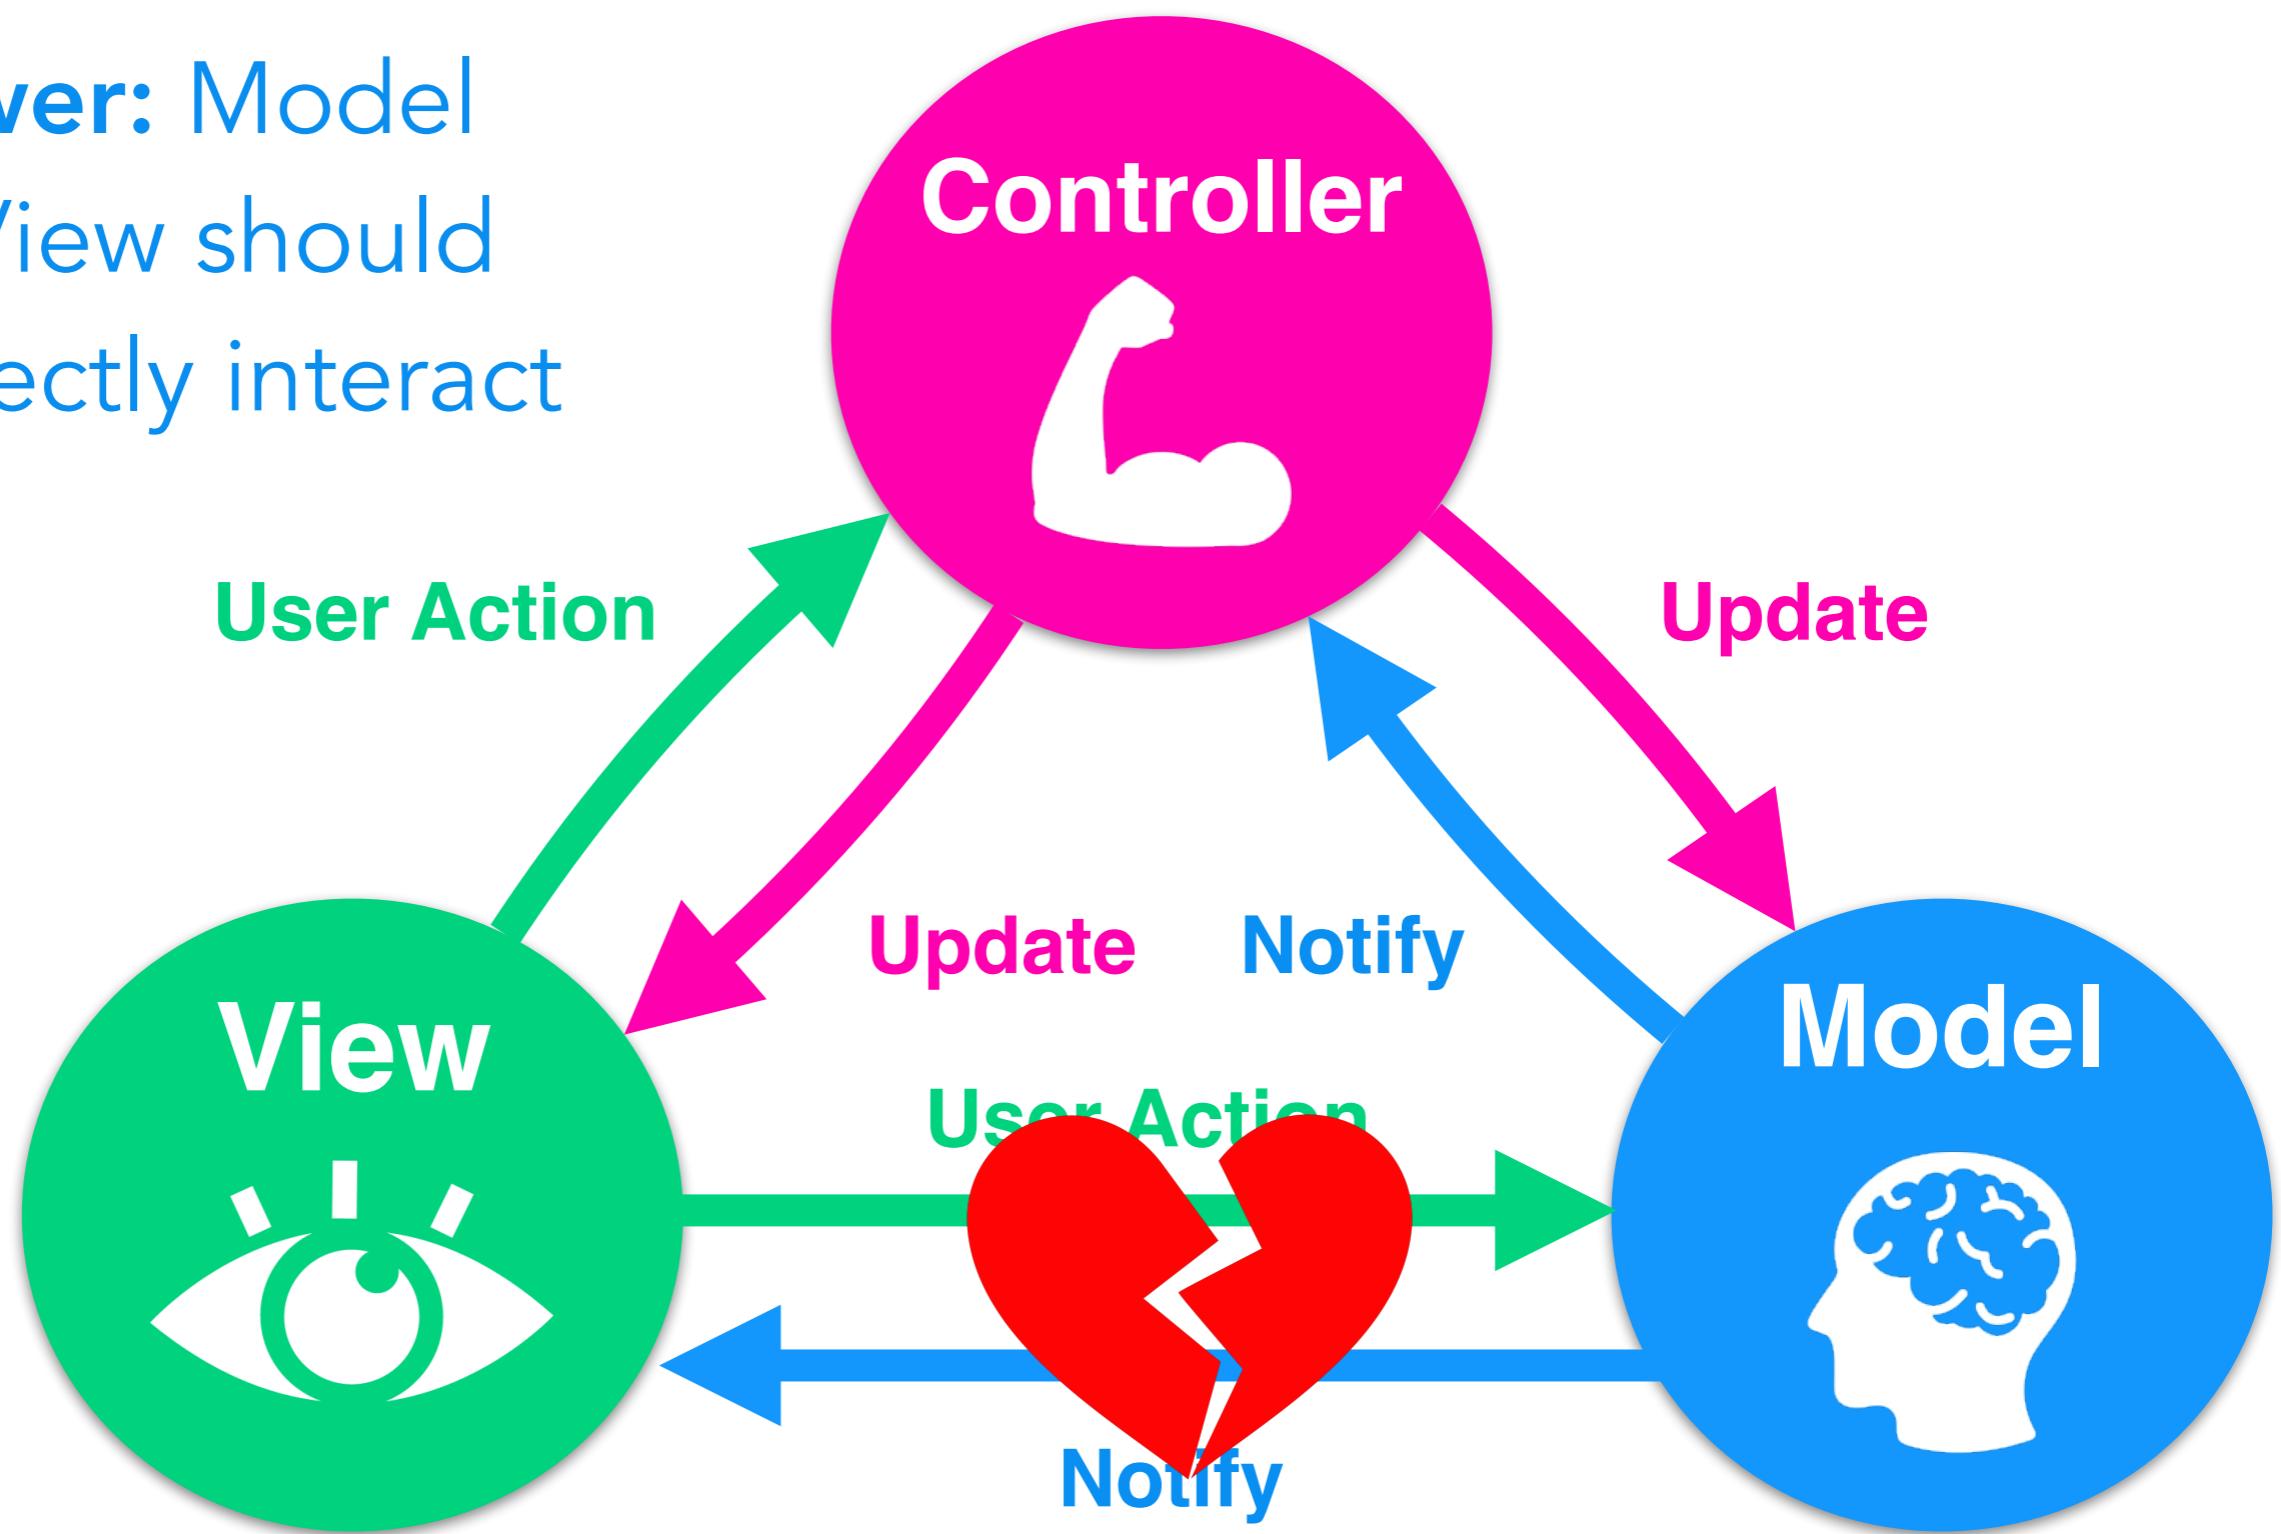

MVC Review : What's Wrong

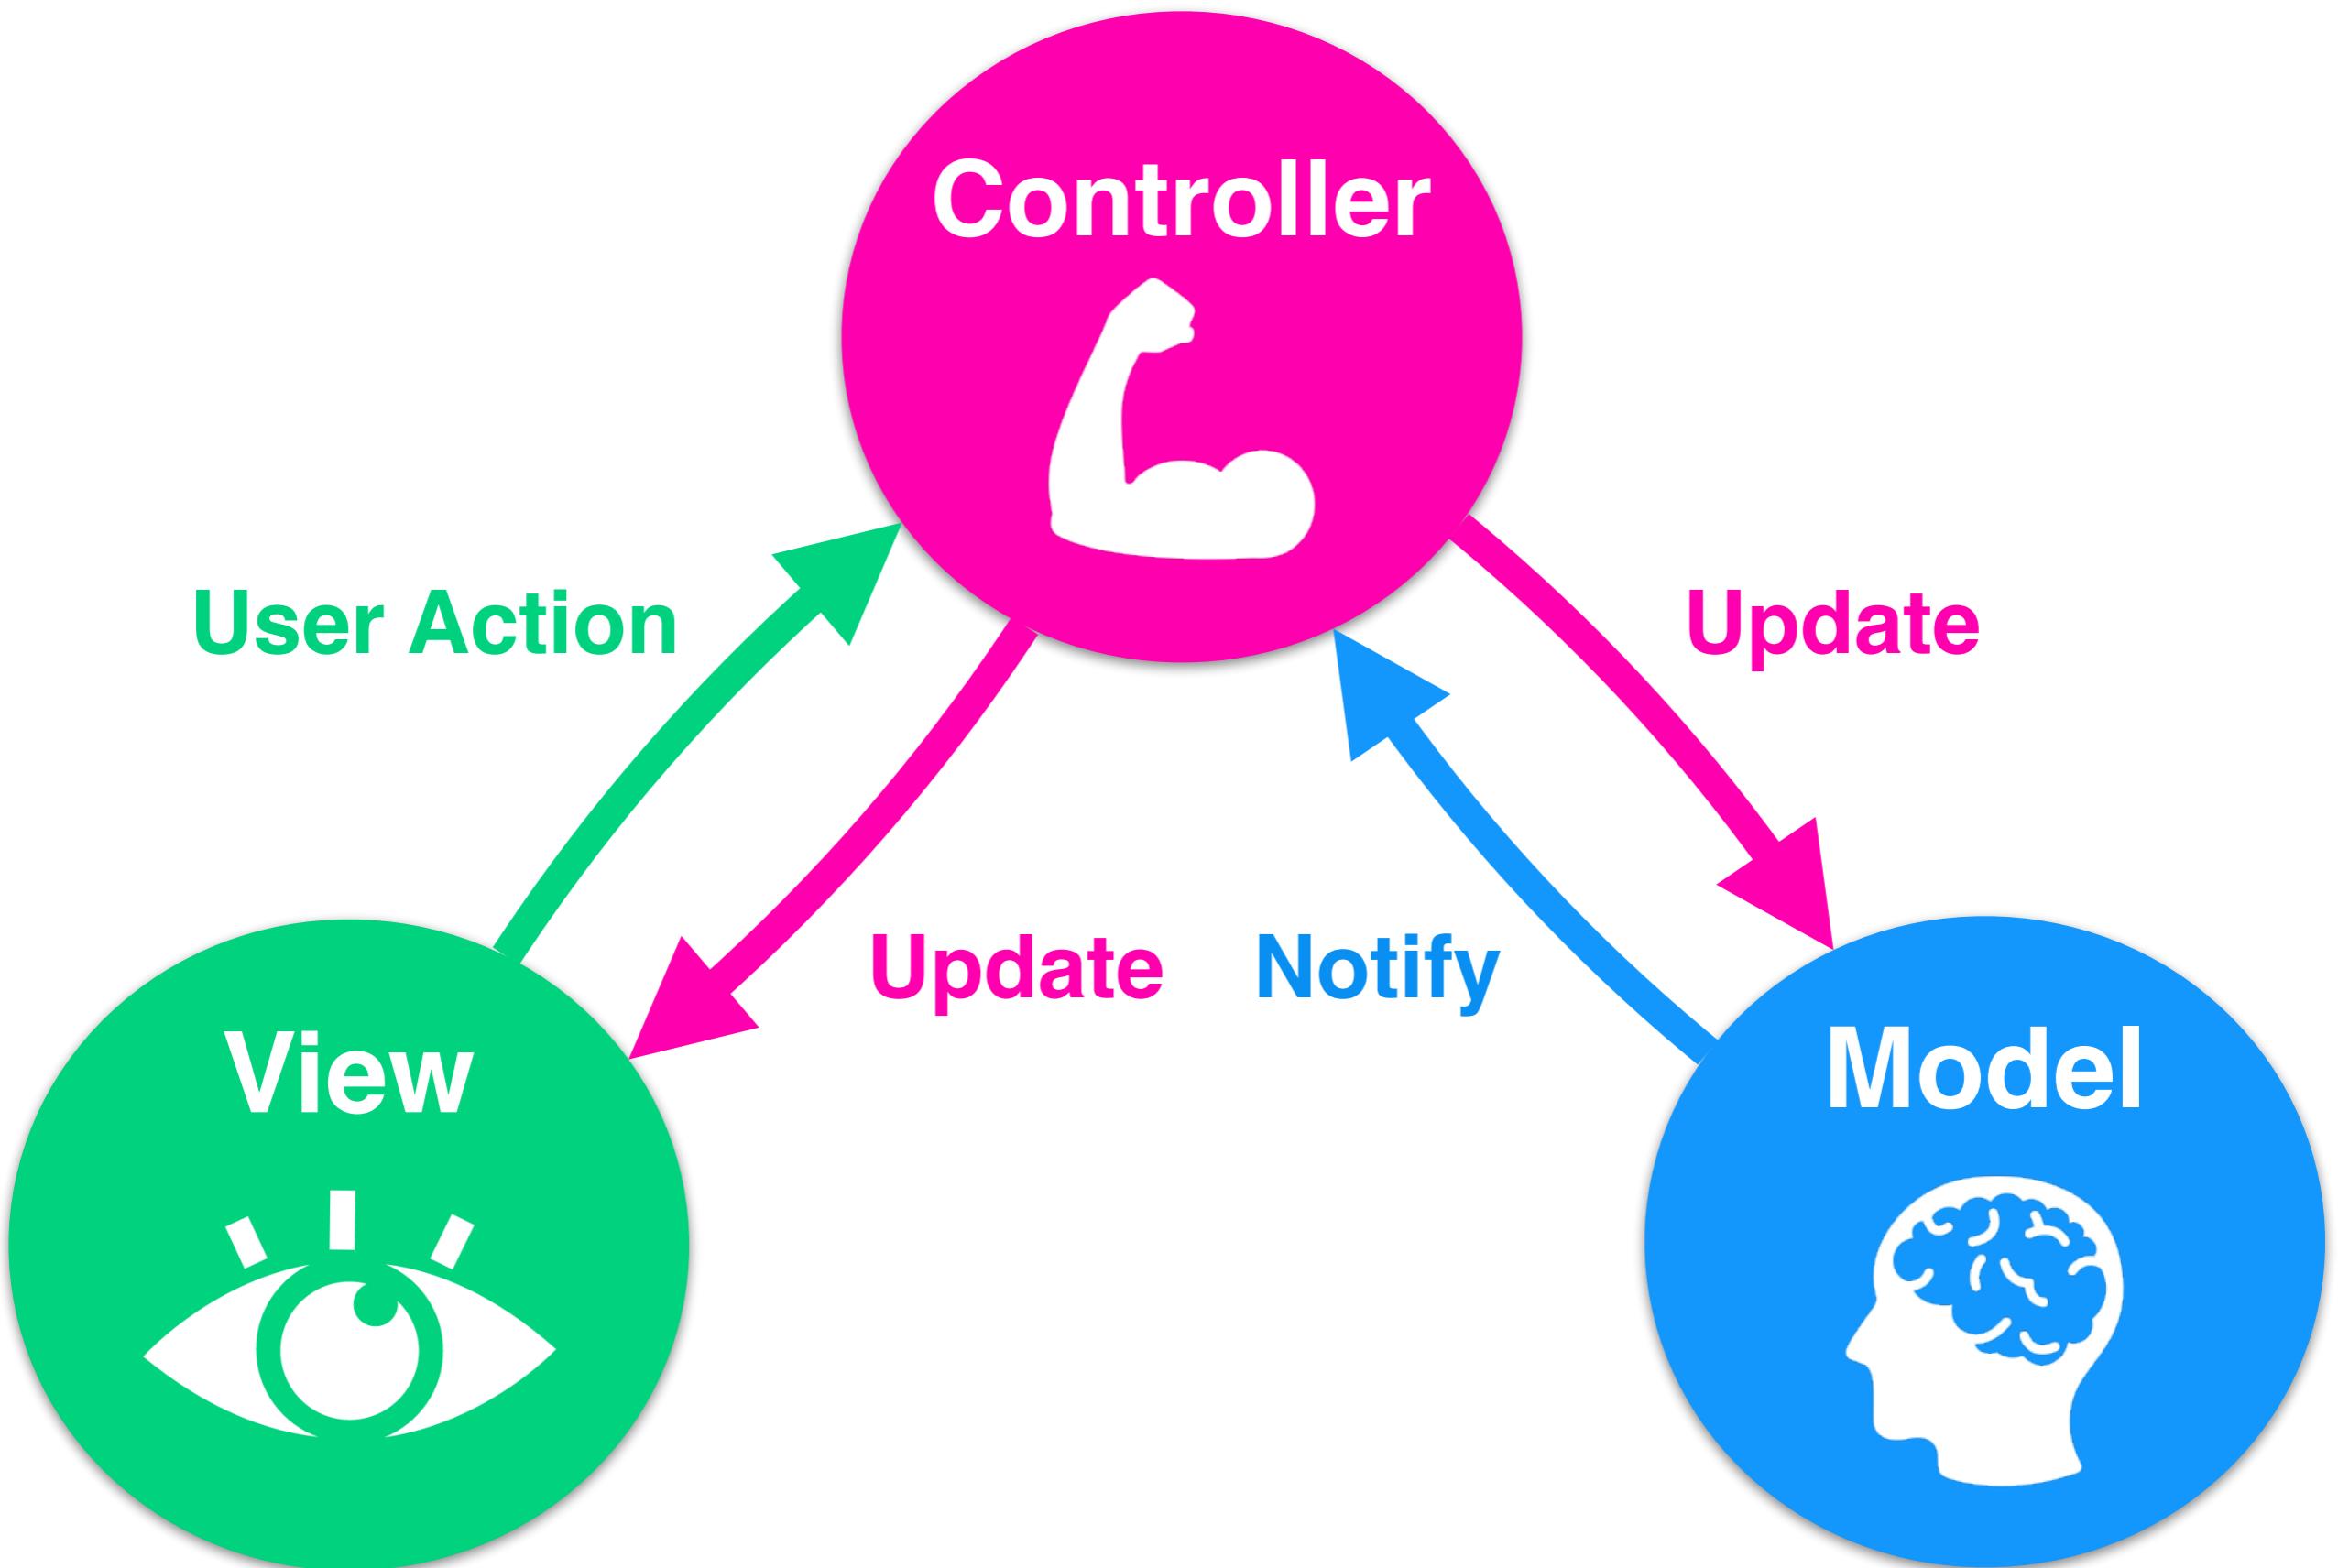

What's wrong with
the following MVC
Diagram?

MVC Review : What's Wrong

Answer: Model
and View should
not directly interact

Model View Controller

View Lifecycle Review

Question: What's the difference between the methods `viewDidLoad` and `viewWillAppear`?

View Lifecycle Review

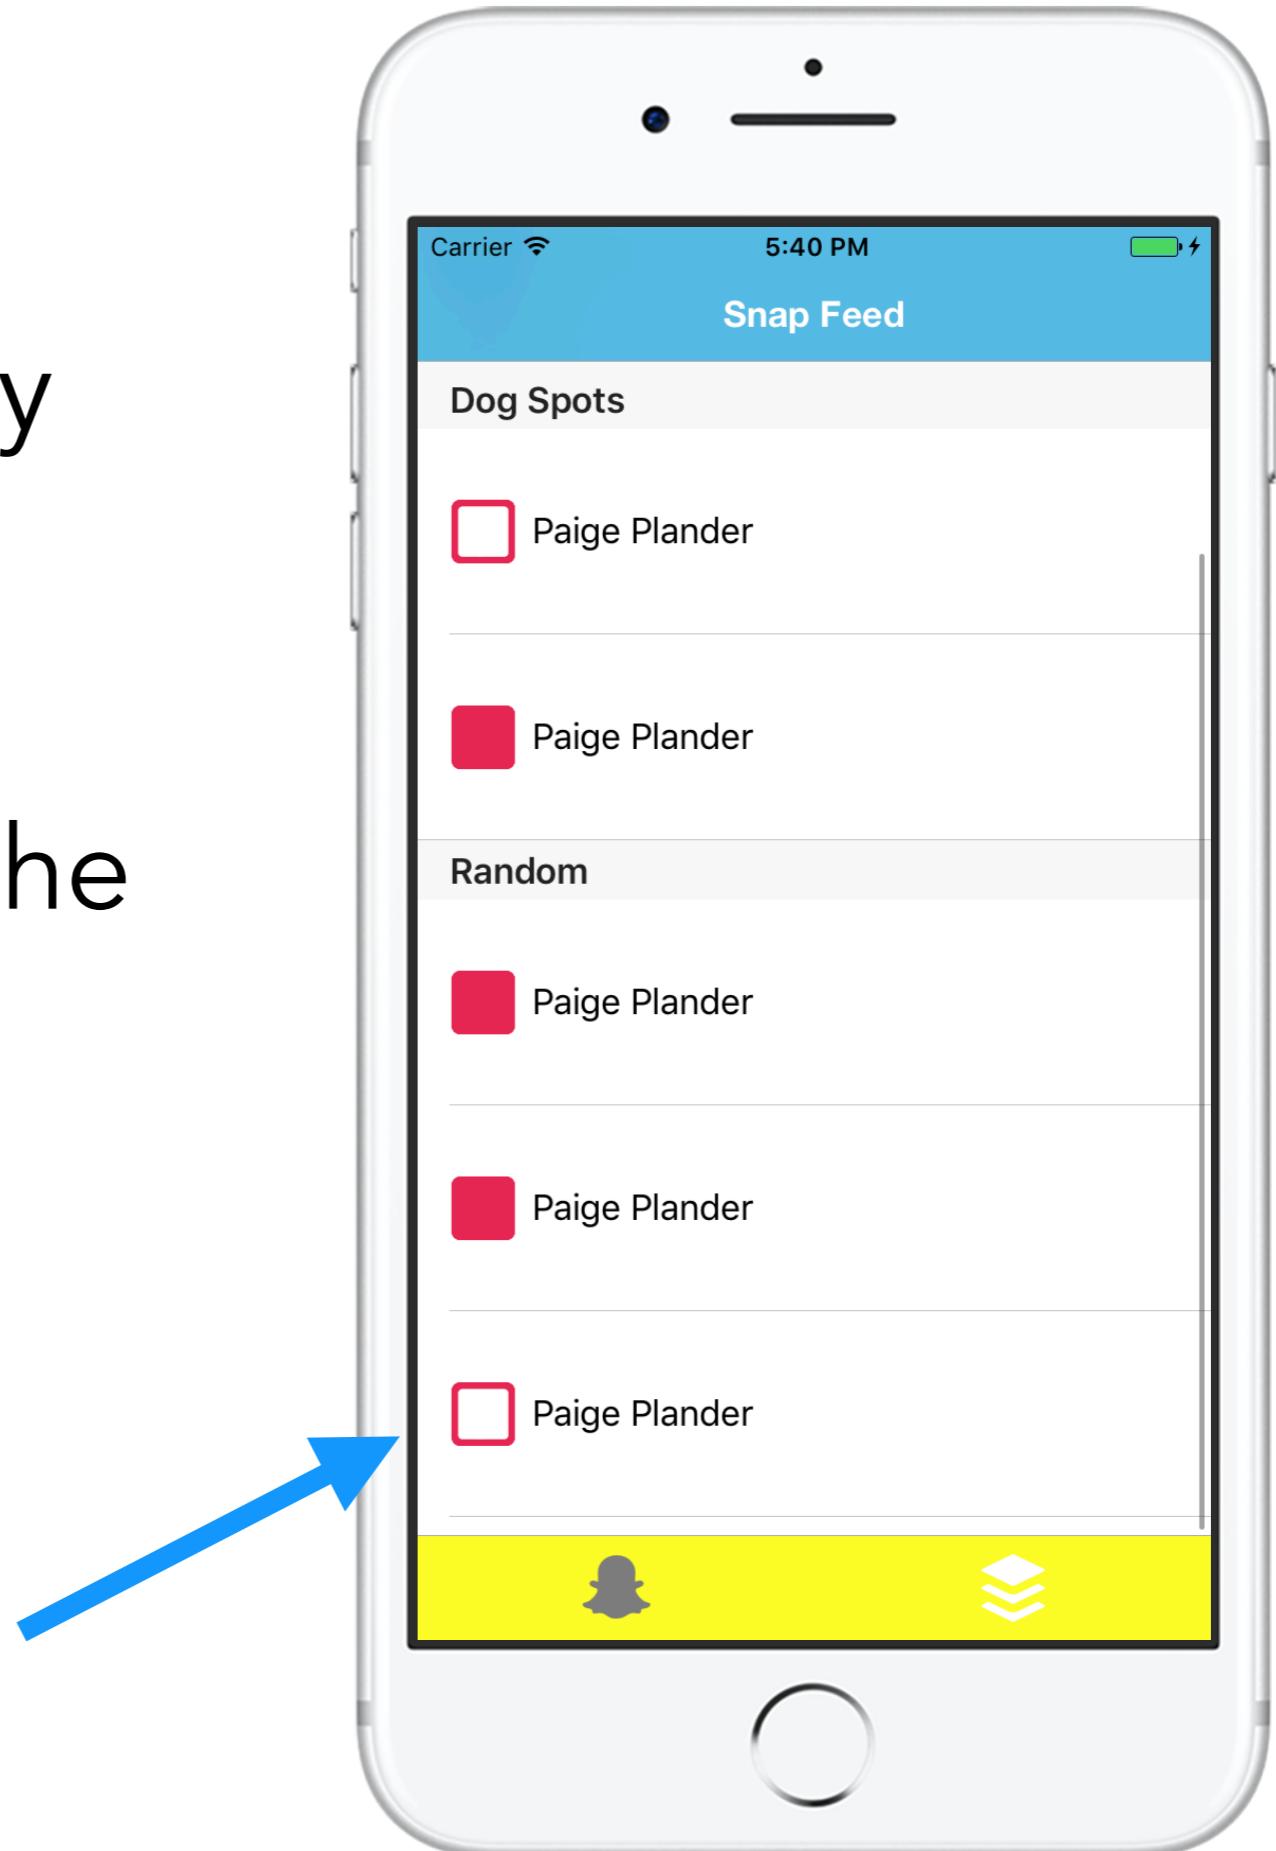

Question: What's the difference between the methods `viewDidLoad` and `viewWillAppear`?

`viewDidLoad` – called once when the view controller is created

`viewWillAppear` – called every time the view appears on the screen

Question: Some of my cells show up as read, even though they shouldn't be - what's the problem in my code?

Wasn't Read! But
still clickable

Snapchat Clone Table View Bug

Question: Some of my cells show up as read, even though they shouldn't be - what's the problem in my code?

```
func tableView(_ tableView: UITableView, cellForRowAt indexPath: IndexPath) -> UITableViewCell {
    let cell =
        tableView.dequeueReusableCell(withIdentifier:
            "postCell", for: indexPath) as! PostsTableViewCell
    if let post = getPostFromIndexPath(indexPath:
        indexPath) {
        if post.read {
            cell.readImageView.image = UIImage(named:
                "read")
        }
    }
    return cell
}
```

Snapchat Clone Table View Bug

Since Table view Cells are **recycled** , you need to check if the cell has is not read, and set image to “unread”

```
func tableView(_ tableView: UITableView, cellForRowAt indexPath: IndexPath) -> UITableViewCell {
    let cell =
        tableView.dequeueReusableCell(withIdentifier:
            "postCell", for: indexPath) as! PostsTableViewCell
    if let post = getPostFromIndexPath(indexPath:
        indexPath) {
        if post.read {
            cell.readImageView.image = UIImage(named:
                "read")
        }
    }
    return cell
}
```

Snapchat Clone Table View Bug

```
func tableView(_ tableView: UITableView, cellForRowAt indexPath: IndexPath) -> UITableViewCell {
    let cell = tableView.dequeueReusableCell(withIdentifier: "postCell", for: indexPath) as! PostsTableViewCell
    if let post = getPostFromIndexPath(indexPath: indexPath) {
        if post.read {
            cell.readImageView.image = UIImage(named: "read")
        } else {
            cell.readImageView.image = UIImage(named: "unread")
        }
        cell.usernameLabel.text = post.username
    }
    return cell
}
```

Solution Code

Strong vs Weak?

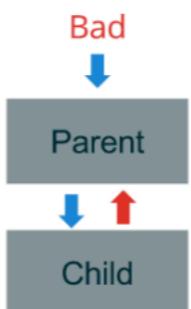

Strong vs Weak?

Strong - Two objects both increase each other's reference counts and are in memory forever.

Weak - Only one object increases reference count, so when one gets deallocated so does the other.

Retain Cycles

```
@class Child;
@interface Parent : NSObject {
    Child *child; //instance variables implicitly __strong
}
@end
@interface Child : NSObject {
    Parent *parent; //also implicitly __strong
}
@end
```

What are the 2 required methods for Tableviews?

What are the 2 required methods for Tableviews?

```
func cellForRow(at indexPath:  
IndexPath) ->  
UITableViewCell?
```

```
func numberOfRowsInSection(inSection  
section: Int) -> Int
```

Var vs Let?

Question: What's the difference between something declared with “`var`” and something declared with “`let`”

Var vs Let?

Question: What's the difference between something declared with “`var`” and something declared with “`let`”

`Let` - Immutable (Constants)

`Var` - Mutable

! vs ?

! vs ?

? - Can take on a value of **nil**

! - Cannot take on value of **nil**

Classes vs Structs?

Question: What's the main difference between a Class and a Struct?

Classes vs Structs?

Question: What's the main difference between a Class and a Struct?

Classes - Pass by reference

Structs - Pass by value

Classes vs Structs?

What is/are Swift's Generic Type(s)?

What is/are Swift's Generic Type(s)?

Any?
NSObject

When do you have to use self?

When do you have to use **self**?

Closures

```
dispatch_async(dispatch_get_main_queue(), {  
    // we cannot assign to properties of self  
    self.view = nil  
  
    // but can access properties  
    someFunc(view)  
})
```

How do you safely unwrap an optional?

How do you safely unwrap an optional?

```
if let protectedString = str  
{  
    print("Hi World")  
}
```

What is the purpose of “with” in this method definition?

```
func foo(with bar: int) {  
}
```

What is the purpose of “with” in this method definition?

```
func foo(with bar: int) {  
}
```

“With” is the descriptor for each parameter.

Custom App

Due Tuesday at 11:59pm

Final App Presentations

Friday of dead week at 11:00 am in 310 Jacobs

**Attendance mandatory (cannot use
unexcused absence)**
